

THE PROBLEM: STRATEGY & RESEARCH ARE SLOW, EXPENSIVE, OR UNGROUNDED

Enterprises, governments, and DFIs face a broken choice. Traditional strategy consulting engagements take weeks to months and cost hundreds of thousands to millions of dollars for a single scenario. General-purpose LLM chat tools are fast and inexpensive, but they are not grounded in the organization's own documents, cannot model multiple quantitative strategies side-by-side, produce no audit trail or compliance mapping, and generate no boardroom-ready deliverable — leaving executives, boards, and regulators without a defensible basis for decisions.

OUR SOLUTION: MINSKY™ ATLASIQ

Minsky™ AtlasIQ is a sovereign-grade simulation and decision-intelligence platform, built on the **Minsky™ AiFactory** engine, that replaces traditional consulting, audit, and policy advisory functions with a multilingual, logic-based AI system. Delivered as a secure multi-tenant SaaS, it enables governments, DFIs, corporates, and mission-aligned organizations to model, simulate, and implement decisions in real time — with ethical overlays, document-grounded research, and zero hallucinated figures. Minsky™ AtlasIQ democratizes access to elite advisory capabilities once reserved for major consultancies and billion-dollar institutions, powering decisions from national budgets and ESG audits to complete Go-To-Market (GTM) entry strategies..

Plans Available: Individual, Enterprise, On Prem, Sovereign Cloud

Strategy Studio

AI-generated, multi-strategy scenario modeling

- AI generates the input parameters for any business or policy scenario
- Models up to five alternative strategies with country-specific context
- Delivers detailed or executive-summary reports across 15+ analytical modules

⚡ **Typical output: 100+ page quantitative GTM / policy report with financial, risk & compliance modeling**

Research Studio

Document-grounded deep-dive analysis

- Upload up to 10 documents (PDF, Excel, Word) for direct AI analysis
- Each request auto-routed to the best-suited Minsky™ engine
- Covers benchmarking, cost/TCO, compliance mapping & geopolitical risk

⚡ **Grounded in your own source material — not general web recall or unverified chat output**

Dashboard & AI Comparison

Cross-strategy synthesis and Q&A

- Compare up to three saved strategies side-by-side
- Ask free-form questions across saved strategies and reports
- Every result exports as a boardroom-ready, branded PDF or Word report

⚡ **Replaces manual partner/analyst synthesis and deck-building cycles**

Enterprise SaaS Platform

Governed, multi-tenant deployment

- Dedicated multi-tenant workspaces with per-user data isolation
- Admin-managed teams and seats, credit-based subscriptions, built-in billing
- Cloud, on-premises, or fully sovereign / air-gapped deployment

⚡ **On-Prem / Sovereign AI: routes to self-hosted models with zero code leaving your infrastructure**

STRATEGIC USE CASES DEPLOYED SUCCESSFULLY (Sample)

- **USA:** GTM strategy for AI Labs training and skill development; GTM strategy and funding proposal for AI incubators
- **Maldives:** Detailed AI Readiness proposal for universities, government agencies & corporations
- **Qatar:** Construction investment simulation for national-level planning
- **India:** Go-to-market strategy for establishing AI Centers of Excellence
- **Saudi Arabia:** Strategic investment planning for AI data center development
- **UAE:** Investment risk model for development of AI data centers

15+

Analytical modules per Strategy Studio report

10+

Source documents analyzed per Research Studio query

5

Alternative strategies modeled simultaneously

100+

Page boardroom-ready branded deliverable

MINSKY™ ATLASIQ

AI-Native Strategy & Research Decision-Intelligence Platform
A Minsky™ Platform Suite Product | Ai Labs, Inc.

HOW MINSKY™ ATLASIQ COMPARES

Traditional consulting firms and general-purpose LLM chat tools each solve part of the problem — deep domain expertise, or fast, low-cost iteration. Neither delivers governed, quantitative, document-grounded strategy at SaaS speed and economics. **Minsky™ AtlasIQ** operates at a different layer: a multi-tenant, auditable decision-intelligence platform purpose-built for boards, regulators, and government stakeholders.

Capability	Minsky™ AtlasIQ	Traditional Consulting (McKinsey, Cap Gemini, etc.)	General LLM Chat (ChatGPT, Claude, etc.)
Typical turnaround	Minutes to hours	6–16+ weeks per engagement	Minutes — but ungrounded
Typical engagement cost	Credit-based SaaS subscription	\$250K–\$2M+ per engagement	Low-cost chat subscription; no deliverable
Quantitative multi-strategy modeling	✓ Built-in — up to 5 strategies scored side-by-side	Manual, analyst- and partner-dependent	X Single ungrounded narrative
Document-grounded research	✓ Native — up to 10 source documents per query	Manual analyst review of source material	X No persistent document grounding
Regulatory / compliance mapping	✓ Built into every report	Manual, often a separate paid workstream	X Not addressed
Audit trail & traceability	✓ Full — every output is logic-based and sourced	Partial — engagement notes and workpapers	X None — outputs are not reproducible
On-prem / sovereign / air-gapped	✓ Native deployment option	N/A — people-based delivery model	X Cloud-only
Boardroom-ready branded export	✓ Automatic PDF / Word report	Manual deck-building by consulting team	X Manual copy-paste, unformatted
Multi-tenant enterprise architecture	✓ Yes — per-user data isolation, admin controls	N/A	X No
Consistency across engagements	✓ Deterministic, repeatable methodology	Variable by team, partner, and firm	Variable — not repeatable
Best fit	Governments, DFIs, enterprise decision intelligence at scale	Bespoke, high-stakes single engagements	Ad hoc individual brainstorming

REPLACING THE CORE OF TRADITIONAL STRATEGY & RESEARCH ENGAGEMENTS

Most traditional strategy engagement spend sits inside research, scenario modeling, cross-team synthesis, and report production. **Minsky™ AtlasIQ** automates these functions end-to-end, allowing a small governance team to commission decision-grade analysis that previously required a large external engagement team:

Traditional Function	Replaced / Automated By
Market & competitive research analysts	Research Studio — ingests up to 10 source documents, auto-routed to the best-suited Minsky™ engine
Strategy consulting teams (scenario design)	Strategy Studio — generates input parameters and models up to five alternative strategies
Cross-strategy synthesis & partner review	Dashboard & AI Comparison — compares up to three saved strategies with free-form Q&A
Deck & report production	Automatic boardroom-ready, branded PDF / Word export on every result
Compliance & regulatory review	Built-in regulatory and ethical-governance mapping across every report

WHO IT SERVES:

Stakeholder	Value Delivered
Governments & Investors	Policy modeling, fiscal reform, investment risk modeling & sovereign debt simulation
DFIs, MDBs, Donors	ESG simulation, grant optimization, investment diligence
Large Corporates & Banks	Risk modeling, GTM strategy, ESG / CSRD alignment
SMEs, Startups & Individuals	Financial modeling, investor proposals, business planning
NGOs & Communities	Impact audits, grant writing, multilingual development planning
